*Cancer, heart disease, and stroke are the three most common chronic diseases in Canada. Primary Risk Factors of Chronic Disease Chronic disease can happen to anyone. The primary risk factors for developing a chronic condition include:

Critical Illness and Chronic Disease Statistics in Canada

Although chronic diseases are among the most common and costly health problems facing Canadians, they are also among the most preventable. Chronic (or non-communicable) diseases are typically characterized as having an uncertain etiology, multiple risk factors, long latency, prolonged affliction, a non-infectious origin, and can be associated with impairments or functional disability.
