The Ergonomics of Manual Material Handling Manual Material Handling (MMH) tasks are physical work activities that involve exertion of considerable force because a particular load is heavy or the cumulative loads during a workday are heavy. Examples of MMH tasks include lifting or lowering, carrying, and pushing or pulling.

The Ergonomics of Manual Material Handling

Ergonomic products in the material handling industry are solutions relating to/ designed for efficiency and comfort in the facility working environment. Ergonomic lifting equipment such as lift tables, pallet positioners, vacuum lifts, and container tilters provide this efficiency and comfort by putting products and materials into a position in which they can be safely worked on.

Ergonomic Lifters and Lift Tables | Bode Equipment Company

Ergonomic handling solutions can even promote higher levels of productivity in the workplace. Forcing workers to manually move and manipulate heavy loads results in widespread fatigue. If a worker is required to lift and move a dozen heavy crates from one side of the factory to the other, he or she will probably feel exhausted.
